## ABOUT US

The Haemophilia Society of Singapore is a voluntary organisation that was set up in 1985 by a group of people with haemophilia, parents, healthcare providers and some interested professionals. It is an Institution of Public Character and an affiliated member of the National Council of Social Service and a member of the World Federation of Haemophilia.

The Society's main service to its members is to provide subsidies for members' treatment costs at government hospitals. This is to alleviate the high costs that members often incur following bleeding episodes. Apart from financial assistance, the Society offers support to parents to help them cope with a haemophilic child, promotes home treatment and keeps members abreast of developments in the area of haemophilia care.

### **Our Mission**

To ensure that every person with haemophilia receive affordable and safe treatment so as to lead productive lives in society.

### **Our Objectives**

- To help people with haemophilia to achieve their potential.
- To look after the welfare of people with haemophilia.
- To assist with treatment costs.
- To promote public awareness and understanding of haemophilia

## PRESIDENT'S MESSAGE

From its humble beginning in 1985, the Haemophilia Society of Singapore celebrated its 30th anniversary in December 2015. Thirty years is a long time; yet, we have struggled through the ups and downs and moved on to see improvements in the lives of our members. We have moved on from cryoprecipitate to factor concentrate, from plasma derived to recombinant, from hospitalization to home treatment, from on-demand to prophylaxis (for some), from no subsidy to partial subsidy given by the hospitals as well as by the Society, and from just replacement therapy to a comprehensive approach in the treatment centres. All these have contributed to the improved situation among people with haemophilia (PWH).

Today, we have a group of younger generation PWH who are more active, who experience less absenteeism from school and work, who are able to participate more in certain games and sports, who are able to travel overseas and most importantly, who are able to live without fear of bleeding. They can have aspirations and dreams like other normal children. Some have ambition to become engineers, lawyers and doctors. Haemophilia is no longer such a debilitating illness and they can look towards a promising future.

World Haemophilia Day falls on 17th April and the World Federation of Haemophilia's goal for 2016 is "Treatment For All" and its interactive website invites people from around the world to connect with each other and share thoughts on how to achieve "treatment for all". In Singapore, a number of events were organized in April by various hospitals and a pharmaceutical company. There was a dental workshop at NUH and a Mothers' Group baking session at Tott's. In addition, various media's publicity helped to create greater awareness of haemophilia.

At the community level, the Society was fortunate to be named a beneficiary for funds raised by the students of Hillgrove Secondary School in July 2015, Lee Foundation for its generous donation and the Singapore Island Country Club's May Day Charity Event 2016. As a small charity, fund raising to help meet members' treatment costs will always be a challenge. Nevertheless, the Society believed it must do its best to achieve its financial targets. It launched its third "Project Calendar 2016" which proved to be its most successful! Special thanks to the "little artist" Kayley Wee, whose paintings boosted sales and all who supported this project. In May 2016, under the capable leadership of Dr Tan Hooi Hwa, the Society held its second charity film premiere. Aside from its initial hiccups, the film premiere event was a success and its target was met thanks to Tote Board for its contribution, the many generous donors, friends and well-wishers.

The Society's total expenditure was \$205,057 and the total income for the year 2015/16 was \$259,997. The increase in income was higher than the previous year 2014/15 and this was attributed largely to the generosity of our donors who supported the Society's fund raising efforts. The Society expends the donations raised mainly on treatment subsidies of its members, which totaled \$170,142.93 for the year. The Society continues to be helped by a team of dedicated volunteers, with no paid staff and every dollar raised would enable the Society to do more for the haemophilic community in Singapore.

With the government's announcement that MediShield Life would also cover pre-existing conditions including haemophilia, we are moving towards becoming a more inclusive society. Moreover, in May 2016, it was reported that attention would also be paid to those "living with unseen disabilities" as they too need "help and acceptance". People with haemophilia, those with autism, the hearing impaired, those with dyslexia and many others would be included. This is good news indeed!

To end on this positive note, I would like to thank the three hospitals, namely Singapore General Hospital, National University Hospital and K K Children's Hospital and the pharmaceutical companies, for their care of our patients and for their contributions to alleviate the financial burden borne by the patients and their families. Lastly, to thank my Executive Committee for their valuable contributions to the work of the Society.

Dr Gan Kim Loon  
President  
Haemophilia Society of Singapore

# HIGHLIGHTS OF THE YEAR

Hillgrove Sec. Sch student collecting old newspapers

The year started on a promising note. The students and staff of Hillgrove Secondary School raised over \$10,800 from their annual community project where old newspapers were collected from households in the vicinity and then sold and its proceeds donated for charity. The Society, represented by Dr Tan Hooi Hwa and See Ek May, attended the cheque presentation ceremony on 12 July, 2015. Dr Tan thanked MP Low Yen Ling, Bukit Gombak CC, Principal Mr Kenneth Lee, staff and students of Hillgrove Secondary School for their combined effort to extend a helping hand to the less fortunate in the community.

Cheque presentation by MP Low Yen Ling and Kenneth Lee to Dr Tan Hooi Hwa.

On 12 December, 2015, the Society celebrated its 30th Anniversary with a buffet lunch at Miramar Hotel with members and volunteers. Dr Tan Hooi Hwa traced the Society's growth over the years

30th Anniversary at Miramar Hotel.

and challenges it faced. With continued improvement in haemophilia care, members can look forward to a better future.

At the community level, the Society was invited by Woh Hup Trust and Rotary Club, Bugis to share about the work of the Society. That provided the Society with an opportunity to create awareness of the haemophilia cause which is often unknown to many. "Together in One Voice" was another event to promote 'Rare Diseases Day' on

Mother & Son @ Mother's Day celebration for a baking session

Wong Yang Ping addressing the Bioscience Plant staff

28 February, 2016 and the impact of "rare diseases" on patients' lives. For the Singapore Island Country Club's 2016 May Day Charity Event, the Society was one of the beneficiaries for donations raised from their charity golf event. Baxalta Singapore sponsored a Mother's Day celebration on 2 May, 2016, where haemophilia sons and their mothers had a baking session together at Tott@Dunearn.

In April 2016, to mark World Haemophilia Day which falls on 17 April, events were held to publicise the occasion. NUH organised a Dental Workshop for individuals with bleeding disorders on 16 April, 2016. It was attended by many members and their families. On 22 April, 2016, Baxalta Singapore invited members to tour their Bioscience Plant in Woodlands. Member Wong Yang Ping addressed plant staff and shared what it meant to have haemophilia and that enabled the staff to have a better understanding of "haemophilia".

Guest-of-Honour was Parliamentary Secretary Associate Professor Muhammad Faisal Ibrahim at the Charity Film Premiere.

The Society's "Captain America – Civil War" Charity Film Premiere was held on 8 May, 2016, at Cathay Grand. The Guest-Of -Honour was Parliamentary Secretary Associate Professor Muhammad Faisal Ibrahim, Ministry of Social & Family Development. The Society would like to thank the sponsors, donors and volunteers, all of whom contributed to the success of this fund raising event.

Media publicity was by way of 7 year old Lee Jue Ming, who appeared on a Channel 8 production "The Joy Truck" which was aired in December 2015 and shared how his family coped with him being a haemophilic child and the adjustments they had to make. Both the Chinese and English press also featured articles on members Chong Ket Ngow, Ang Kai Jun, Faith Loh and mothers and their haemophilia sons. The media coverage provided the Society the much needed wider exposure in terms of readership and viewership.

To keep abreast of developments in haemophilia care, Dr Gan Kim Loon attended the "Asia Haemophilia Experts Meeting" in Korea, from 23 -24 April, 2016. His participation was kindly sponsored by Pfizer Pte Ltd.

## The “Young Ambassadors”

**2015 – a significant year in the milestone of the Haemophilia Society of Singapore’s history. It marks its 30th year in serving those born with haemophilia since the Society was registered in 1985. The year was made more eventful with added contributions from two “young ambassadors” in their own respective ways.**

Lee Jue Ming & Elvin Ng

8 year old Lee Jue Ming who has severe haemophilia, is a cute chubby boy with “a pleasant disposition and the sweetest smile” as described by Elvin Ng, a TCS star.

Jue Ming has from the age of 6 years shared his haemophilia condition in the local press, appeared with his father in a special feature by Ministry of Health on how his healthcare expenses are borne and in a video arranged by Singapore Press Holdings that showed him at home, at play and in hospital for his infusions.

His parents are also very supportive in promoting awareness of Jue Ming’s condition. Jue Ming and his family agreed to appear in TCS’s Channel 8 “Joy Truck “ production

in December 2015. Show host Pornsak and his team visited Jue Ming’s home to learn more about haemophilia, how the family coped and the adjustments that had to be made with a haemophilic child.

Jue Ming’s appearance on television enabled the Society to have a wider coverage in terms of viewership about haemophilia and indirectly also about a charity known as the ‘Haemophilia Society of Singapore’ that helps those with haemophilia. Jue Ming’s “close encounter” with TCS star, Elvin Ng, who happened to be doing a film shoot in Jue Ming’s vicinity, also generated publicity for the Society’s Charity Film Premiere, when Elvin posted on his Facebook to support the event when approached by Jue Ming. That certainly helped to increase ticket sales!

Pornsak & Kayley’s 2016 desk calendar

Kayley Wee

The other “young ambassador” is sweet 7 year old Kayley Wee. Her contribution is by way of the drawing board, the paint pastels, the palette, brushes, marker pens and pencils. From the young age of 4 years, she asked to join “art classes” as she wants to do drawing and colouring. That was where her interest in art sparked. She enjoys attending the classes once a week and learning from the instructor the different medium to be used for the various art pieces. In her own words, Kayley says, “ I like painting very much because I can paint many different and beautiful things”.

And that she did. Her parents kindly agreed to select some of Kayley’s favourite paintings for Project Calendar 2016, where all proceeds would be for the Haemophilia Society of Singapore. 3000 copies of the desk calendars were printed and thanks to all who bought or donated towards the Project, the Society was able to raise an amazing sum of over \$80,000! “Ambassador” Jue Ming helped too – he showed it to Pornsak who then posted the desk calendar on his Instagram and that created another avenue of sales.

“Little Artist at work”

**To our two “young ambassadors” – Thank you and continue your good work.**

## KEY PROGRAMMES

There are just over 200 people in Singapore registered with haemophilia, mostly males, though women can carry the genetic alteration causing haemophilia. Haemophilia is usually inherited, but one-third of those affected are without any known family history.

Members of the Haemophilia Society comprise babies, toddlers, children, youths, young and mature adults. Living with haemophilia in modern times has seen considerable improvement in the quality of lives of those with haemophilia. There are challenges and trying times a haemophilia patient will face, but these can be overcome with family support and medical advances. The Society aims to assist its members to lead independent and fulfilling lives.

Effective treatment for haemophilia is available, but as yet there is no cure. Treatment is very costly for those with haemophilia and most working individuals and families would have difficulties meeting treatment costs, especially if they experience frequent bleeding episodes into muscles and joints, which if not properly managed can cause arthritis and joint problems. Aid from the Society is rendered to all its members regardless of financial background, to help alleviate the heavy financial burden.

The key programmes offered by the Society are aimed at addressing the different needs of its members.

- **Treatment Subsidy**

Haemophilia is treated by replacing the missing clotting factor in the blood. This is done by injecting a product that contains the needed factor into the vein. Bleeding stops when enough clotting factor reaches the affected area. The Society assists its members with monthly subsidies to defray part of their treatment costs, capped at \$800.00 and \$400.00 per month for youths/adults and children respectively. The subsidies' programme is the main expenditure item for the Society. Hence all its funds raised are used mainly to fund this programme.

- **Welfare Fund**

The Society has in place a welfare fund, with funds specifically designated to provide financial assistance to members with haemophilia facing financial hardships. Members who require financial aid would need to submit their request and aid is approved when the situation warrants it. Regular reviews are conducted and long term dependency discouraged. Members are also referred to other social agencies for more appropriate help if required.

- **Educational Awards**

The Society initiated the Educational Awards programme also known as "Merit Awards" in the year 2000. The awards were to encourage members in school to value the importance of education which will improve their lives and allow them to reach higher heights.

*Educational Award presented by  
Dr Gan Kim Loon to Tan Yu Fei*

The awards given at each Annual General Meeting are based on academic performance, categorised under "excellence" and "encouragement". The monetary rewards range from \$200.00 for primary schools to \$600.00 for junior colleges/polytechnics/ITE. For 2015, 8 awards were given to members from primary (2), Secondary (3) and Polytechnic/NAFA/ITE (3).

For those pursuing tertiary studies in a recognised local tertiary institution, there is the Dulcie Wilson Scholarship Fund in memory of the late Mrs Dulcie Wilson, which was set up in 2010. Grants of \$1000.00 per academic year for a maximum of 3 members were available. No applications have been received to date.

- **Seminars / Talks**

Seminars and talks are organised for members of the Society to impart knowledge of haemophilia, to keep members abreast of latest developments and management of haemophilia from specialists in the field, both locally and from overseas. Talks for members range from caring for joints, importance of dental care to physical activities members can engage in.

*Dr Tan Hooi Hwa & HSS members at the NUH Dental Workshop.*

A dental workshop was jointly organised by the Society and National University Hospital in conjunction with World Haemophilia Day on 16 April 2016. The speakers were Dr Tong Hwei Jinn and Dr Raymond Wong. Members found the talks informative and educational.

*Dr Tong Hwei Jinn*

- **Support Group**

The Mothers' Support Group was set up in 2009, primarily to enable mothers with haemophilic sons to obtain moral support from one another and to share their experiences in managing their sons' conditions. Activities held included gatherings at fellow members' homes, where the more experienced mothers could demonstrate self-infusion and encourage home treatment for prompt treatment of bleeding episodes.

- **Activities / Outings**

The Society's calendar of activities for the year ranged from a one day tour to Desaru to a tour of Baxalta's Bioscience Plant in Woodlands. Members who signed up for the Desaru outing enjoyed the tour which was "educational" for city dwellers to learn about the different fruits, the ostrich and to sail down the river in the late evening to watch the thousands of fireflies "glowing" in the dark!

*Ostrich Farm & Fruit Farm*

On 12 December, 2015, to celebrate the Society's 30th Anniversary, members had a scrumptious buffet lunch at Ferntree Café in Miramar Hotel. Food and fellowship made the event memorable!

*HSS 30th Anniversary Lunch*

On 22 April, 2016, in conjunction with World Haemophilia Day, some members of the Society toured the Baxalta Bioscience Plant in Woodlands. The activity benefitted both the members who had a chance to visit the Plant and the Plant staff who learnt more about haemophilia.

*HSS members & staff of Baxalta's Bioscience Plant*

For nine members and their mothers, a married member and his wife whose devotion he appreciated – it was a Mother's Day with a difference! They paired up together to bake yummy cupcakes and cookies at Tott@Dunearn. It was indeed a 'sweet' event for all.

*Mother's Day at Tott@Dunearn with Instructor and students*

## 请多关注血友病患者

CHONG KEK NGOW 张克敖

在去年10月28起，新传媒8频道每逢晚上8时正播出带来爱心与欢乐的感人故事节目《快乐速递》，给予那些需要帮助的人，带来了人间温暖和新希望。

这个节目播放和介绍那些身患重病和不良于行的人士，以及日以继月，不离不弃地陪伴他们，细心照顾他们的日常饮食起居的家属亲人与义工们的感人事迹。那一幕幕感性动人的画面，令人看了心酸泪流。

最先一期介绍是刚出世娘胎，便得了先天性血友病B型患者7岁的李觉明。他从小就经常进出医院，打针治疗，每周需注射凝血剂第九因子的针药，每支针药约300元，每个月的医药费平均约两千元。幸亏他的医院费获得政府保健基金（Medifund）全额资助，才得以减轻家庭的负担。

除了血友病外，觉明还患有轻微自闭症以及学习缓慢的病症。之前，觉明早上是就读于特别学校，目前已经进入小学。然而，小小年纪，天真活泼的他，却日日饱受病魔折腾。父亲为了安心照顾他，辞去了技术人员的工作。所以，在外工作的母亲是家里唯一经济支柱。

血友病是一种遗传性基因缺陷的疾病，一般分别为A型（第8因子）和B型（第9因子）两种。最早发现源自英国维多利亚女王，在欧洲被视为贵族后裔才有的王室病。

由于患者血液中缺乏一种能跟血小板凝固的凝血因子。所以容易引发体内出血。尤其是牙龈与关节部位稍微碰撞，行走激烈或运动，都会造成出血淤青肿痛，即使什么都没做也会发生自发性出血，如不及时注射凝血剂因子可能致命。到了后期，将会导致关节硬化而变成畸形。

在上世纪40之60年代出生的血友病患者，是注射由中央医院血液中心，从捐血者的血液提炼而成的凝固剂

（Cryoprecipitate）来凝血。早期的医院由于卫生安检条件差，医药配备落后，有的捐血者带有肝炎和其他病毒，院方又无法检验出捐血者的血液是否安全卫生，结果导致80%年长血友病患者感染到C型肝炎。所以，这些病患每三至六个月要到医院进行血液检查和肝扫描，严重者则需要打针服药。这些美国生产的最新治疗的针药配套大约要6万元，价格令人咋舌，不是一般人能够负担得起。

CHONG KEK NGOW 张克敖

新加坡的血友病患者估计约有400名，他们进出医院已经习以为常。最令人关注的莫过于医药费的问题，由于这些药物没有被列入可获得津贴的标准药物清单（Standard Drug List），对于病患者无疑是一个重担。

虽然说部分患者得到政府的保健基金资助，但还有部分患者来自不具津贴资格的中等收入家庭，因为应付不了长期的医药支出，也陷入经济困境隐忧。

如今政府已逐步修改条例，让这些重病者也能够得到终身保健（MediShield Life），无疑是个好消息。在此恳请政府能够关注他们的医药负担，再次做出适当调整，给予重病者在购买药物时多一点津贴，把药物价格降低，好让这些能够负担得起接下来的长期医药费。

至于社会上的善心人士，希望能够慷慨解囊，帮助这些病重弱势群体渡过难关。使到他们感受到人间充满关爱和新希望，迈向温馨光明道路。

## “ Class pranksters forgot he could bleed to death ” .....

His classmates knew he could bleed to death if he was injured, but that did not stop some of them from tripping him up during lesson breaks, or pulling away a chair when he tried to sit down.

For four years in primary school, Ang Kai Jun, now 12 and in secondary school, endured the antics of fellow pupils who failed to comprehend the severity of his illness.

Kai Jun has severe haemophilia, a rare genetic condition in which the blood does not clot properly. There is no cure. Victims bruise easily when they fall, and suffer bleeding into their muscles and joints.

Ang Kai Jun

His prankster pals were not being nasty; they sometimes simply forgot he had a disorder.

Kai Jun, who learnt to be more alert to protect himself, say:

***“It is good that this illness is not visible because I feel like a normal person, but it is also bad because when people can’t see it, they forget I have it.”***

Though he has severe haemophilia, which means he does not have any blood-clotting factors and requires regular injections of clotting agents, he is fortunate to be able to benefit from medical advances.

More patients can now go for preventive treatment like injections that makes a difference to joints. Joint damage is a common problem, caused by uncontrolled internal bleeding. It can lead to crippling joint disease. In the past, treatment was given only when the patient noticed he was suffering a bleed.

The last time Kai Jun had a bleed was two years ago, and with his condition under control, his parents think he will be better able to assimilate into society when he grows up.

For older haemophiliac Y.S.Sum, 55, who walks with a limp due to joint damage, life is not so rosy. He was sacked from his last job – working in a warehouse – in 2012 for taking medical leave two or three days a week to manage his illness. He is still jobless. He says: “I don’t blame people who are unkind to me, because many Singaporeans don’t know about the illness.”

Haemophiliacs overseas also face discrimination. Last year, a student in Beijing sued his university after he was allegedly expelled for having haemophilia, although the disease is not contagious. Under an Education Ministry rule in China, universities can refuse to admit students with serious blood diseases.

Kai Jun’s mother, Madam Khim Chua, 37, says it is not practical for her only child to go around telling strangers he has a disability. “When he takes the bus home, I just remind him to find a seat quickly – but if he can’t, to grab the handlebars in case the bus jerks,” says Madam Chua.

But she makes it a point to educate people in frequent contact with him. Every year, she gives out guides on the condition to his teachers. During home economics lessons, knives are kept away from him to prevent him from being cut.

“As I grow older, my friends understand and are supportive,” says Kai Jun. “ Still, not many people are aware of what it is, and they often give me the ‘blur’ look. “
